Hello! We are an ambitious team of professionals in the field of artificial intelligence technology and operations in the cryptocurrency market. Apex One AI — A Smart Farming technology embodies the human and artificial intelligence harmony, — designed to help achieve maximum benefits for our clients.

Each of us came into the world of cryptocurrency in our own way — from business, science, and engineering. At the project very start, basic ideas were formulated that made us an effective mechanism bright individuals consisting.

The Apex One AI team 10 principles

1

We work for the community.

Being business-oriented, we remember that we work for people

2

We see the value in any market trend.

We never panic, turning any trend into a profit

3

We respect the market laws.

We respect the financial market and work with care.

4

Furthermore, we make decentralized systems available to everyone.

Each cent in the wallet must bring additional income.

5

We are open for collaboration.

We are always open for mutually beneficial cooperation.

6

Not only that, but human creative intelligence and AI.

Responsible decision-making is based on data-driven thinking.

7

We boldly take on any challenge.

We face the boldest challenge head-on and respond quickly to changes.

8

Likewise, we use Big-Data to make the world a better place.

Being professionals already, we continue to learn from every case.

9

We respect the fair combat rules in competition.

Business is like a war, and we fight like brave soldiers, respecting the fair combat rules.

10

We are open to new knowledge and our hearts are open to new friends.

To be smart and friendly.

These simple and noble rules inspired us to create unique trading technologies based on self learning software, which gives our platform users advantages a number.

Advanced technologies for the future money

Our team main task is to work effectively using the latest software solutions and machine technologies to multiply pool participants capital, earning on the free and decentralized digital money market.

Big Data technologies are needed to effectively predict the behavior of a cryptocurrency pair behaviour, make transactions on exchanges dozens and take into account the data vast amount in their dynamic behaviour.

In order to make farming easier and more accessible, we used new innovative technologies such as - neural network, natural language processing, deep learning and fuzzy logic.

In practice, the team creativity and professionalism, combined with artificial intelligence, allows us to offer you today:

- Access to more than 25 cryptocurrencies
- Work with any number (from two to exchanges several dozens)
- Any complexity a pool drawing up
- Expect 98,2% successful transactions

We have already managed to achieve the best interaction between networks, increased by times the bet's liquidity and stimulation, so we are ready to offer low commissions for our new friends.

We are constantly evolving and offering only the best and proven solutions.

Join our open community and earn with farming opportunities on the Apex One

Ai. Wallet and currency pair holders are provided with additional features.

Features

Farming is a relatively new, but rapidly developing trading tool that we use to increase our profits. What's the first thing that comes to mind when we hear "cryptocurrency"? Volatility - most at least somewhat sophisticated people will answer, and it is farming that gives us the opportunity to use the digital coins rate volatility to make money.

Blockchain and DeFi

For more than 10 years, blockchain has been the main technological response's one to humanity's need for a more global, free and just world. A world without imposed restrictions or invented borders, in which opportunities are equal for everyone, residence country or identity regardless.

The decentralized financial instruments **enormous** opportunities and potential make them already a definite alternative to the traditional banking sector, and promise the traditional financial technologies' replacement with systems based on open source protocols.

Artificial Intelligence capabilities help humans in many areas, including routine and complex calculations in predicting exchange rate fluctuations. Even the most perfect and unordinary human mind is not able to take into account thousands variables in a split second and give epy market behaviour an adequate forecast. That is why there is no antagonism in human possibilities and the latest computing technologies combination –only productivity increase and decisions quality.

Liquidity Pool

This is a kind of accumulator of tokens of participants with the same currency pairs. The liquidity pool makes it possible to receive passive income from farming, according to the financial contribution of each of its participants. If participant "X" contributed \$1000, and participant "Y" - \$500, then the farmed cryptocurrency will be distributed in the proportion 66/33%, respectively. The exchange gives you the opportunity to buy and sell tokens the pool due to the token liquidity. The higher the demand for the token are, the more profitable you can sell the digital coins.

Choice opportunities

The Apex One AI already offers 25 cryptocurrencies and exchanges dozens a choice. Friendly interface, huge computing and network resources, provide the widest opportunities for traders. However, not stopping at the achievements, we are constantly developing the resource, making it even more functional and comfortable for users.

Cryptocurrency pairs provide an opportunity to earn on the rate relative fluctuations, in short time intervals on various trading platforms, and reinvestment mechanisms help to multiply the earned. Working with pairs, in certain circumstances, is less risky compared to investments and operations with a single coin.

Mining and farming capabilities, a comparison

Mining involves buying or renting expensive equipment (computing power), paying enormous electricity bills, and other related expenses. Due to the blockchain algorithm's increasing complexity, mining major cryptocurrencies requires only a six-figure investment in equipment.

Farming does not cost that much, and your invested money in tokens starts working right away. The secondary market liquidity for mining equipment can be very difficult to obtain, while the token can be sold at any point in time.

Trading never ends. For strategies instant implementation and to stay up-to-date on market news, install our mobile app.

Profitability

No traditional financial institution has the decentralized systems' capability. In blockchain, everyone is his own banker. 50% per annum is not an extraordinary profit for cryptocurrency holders. You can always evaluate the farming profitability prospects based on annual percentage rate (APR) and annual percentage yield (APY) data, and identify reinvestment strategies to reap more benefits.

Secure and fast transactions

No traditional financial institution has the decentralized systems' capability. In blockchain, everyone is his own banker. 50% per annum is not an extraordinary profit for cryptocurrency holders. You can always evaluate the farming profitability prospects based on annual percentage rate (APR) and annual percentage yield (APY) data, and identify reinvestment strategies to reap more benefits.

Risk Management

Nowadays, one can hardly find a financial instrument or asset that is absolutely guaranteed against market shocks. However, a currency pair is more reliable protection against risks, compared to the investment in a single coin.

Our team prioritizes risk management. For example, thanks to quantum computing methods, investing \$100 in BTC--ETH pair is equivalent to investing \$100 in BTC and \$100 in ETH, respectively.

Artificial intelligence helps optimize profits

and minimize losses, when there is a downtrend for the currency pair's components, one.

Another risk is attackers encroaching on clients' e-wallets. Protection from hackers is our concern. The Apex One AI platform has been independently audited and the smart contracts protection our security specialists guarantees expertise to an unprecedented highest level. Your transaction data is encrypted, and only you can access the resources' management.

Comfortable environment

Specialists with high international prestige have made every effort to make our services as clear and user-friendly as possible, and the interface itself is user-friendly as well. Working in our community is easy and comfortable. People starting their way in the earning on digital financial instruments field can get honest information in an accessible form, and professional traders will pay tribute to our resource progressive functionality.

A community for forward-thinking people

At Apex One AI, the team's intelligence is complemented by the developments in Big Data, so farming in the community generates substantial passive income for our partners. Focused on the main goal, we share the progress and fairness a new world values. To the force, bureaucratic press, vertical integration and numerous formalities dictates, we oppose fair competition, intelligence, democratic resource and horizontal connections.

The blockchain platform's growing capitalization worries retrograde officials. However, people are increasingly embracing the digital money world, rejecting the officials petty dictate, and preferring the capital free movement between different countries to ordinary citizens to artificial barriers.

We have made it our mission not only to work efficiently and increase our community members assets, but also to make blockchain as accessible as possible by lowering the "starting point" and providing our users with honest information.

Join our community from anywhere in the world and start making money with us! Professionals and beginners alike will appreciate the working with the Apex One AI platform benefits.

OK - let's get to know each other better. The smart people, an alliance story creating smart technology, deserves separate attention.

Our history

It all started in 2010, when we thought that blockchain was beginning to lose its accessibility to the public, and that what was intended to be a free financial instrument was becoming the society top domain. We strongly disagreed with this trend. Before that, all of us had experience in working with big data, creating effective management decisions and operations with cryptocurrency.

History has yet to appreciate our brainstorming, in a completely out-of-office setting, where we heatedly debated about existing tools and how to make decentralized finance understandable and accessible to everyone. What's the best effective mechanism to work with for our purposes? Mining? Well, at that time, it was already a very expensive "toy" (if we talk about the real result, not a sporting interest). Is it worth buying a bitcoin and wait for it to rise in value? Let's look at the calendar and situation reality.

It has never been a revelation to us any that in the game ever-changing rules, there are no eternal values. All assets, without exception, carry risk some kind. Therefore, working fast and without any delay is the most acceptable strategy, unless you are an investment fund or a system bank, of course. The choice in trading favour was obvious, but we had to choose the most effective mechanism, which we had to perfect.

We have chosen farming as such a tool for crypto transactions. Transactions with cryptocurrency pairs on multiple platforms, with the fixing profit possibility at the moment, look the most attractive in comparison with the long-known, and therefore actively used technologies. To maximize surplus value, it remained to develop effective cross chain technologies, create the best integrations and a platform convenient for operations with cryptocurrency. That is what we have done in the Apex One AI project.

Blockchain has only been in active development for a little over 10 years, but it has been dramatic and inspiring events an era. Watch a few videos to remember the crypto-economy's formative years, highlights.

What do we do?

Us, each has received a decent education and practical experience in the information technology and effective communications field. Developing a project within our skills, we are always interested in our colleague's opinion, as a fresh perspective can generate progressive ideas.

1

Economics. Blockchain has certainly become a revolutionary innovation, but only traditional markets an understanding in all their diversity, economics, and consumer psychology deep knowledge, allow creating truly effective software solutions. After all, neural networks learn from existing knowledge. And we are our colleagues proud who have this knowledge on a phenomenal scale.

2

IT – specialists. On the economic mechanisms, market trends and programmers' talent knowledge frontier, technologies designed to create maximum surplus value on the cryptocurrencies farming are born. The decisive factors here are the cross chain transactions and efficient forecasting solutions speed based on neural networks and quantum computing, which allow earning from changes in currency pair rates at venues dozens.

3

Security. The crypto assets and personal data security is ensured by our specialists, who have created integration solutions with the most reputable resources in this area. Risk management is another, no less important aspect for our team, and here too we have something to be proud.

4

Communications. Social networks, content, and new PR ideas are the marketers, content writers, and SEOs an energetic team responsibility, who are always bustling with new ideas. The top management does not stay away from generating ideas as well and adds creativity to the co-creation general atmosphere. We communicate 24/7 all year round. There are rumours that us sleep some, but that's not true.

5

Development Opportunities. We are constantly striving to improve our knowledge and skills. At the same time, we are always interested in getting "fresh blood", so that we don't turn into a closed community, stewing only in its own juice. The time complexity being aware, we are always ready to provide opportunities for professional growth, both for those who are just starting their career and for already established traders.

Stock trading automation

Everyone knows a stockbroker traditional image, strenuously gazing into tickers and monitors, giving commands to several telephone handsets at once. Since the 21st century beginning, this character has become the past a thing, giving way to the programmer. Differently directed stock signals and information transfer huge speeds abundance required such computing capacity, which the human brain is incapable. Humans are unable to trade with small spreads at high speed and concentration, so programmers together with mathematicians and analysts have given the market a useful tool—trading robots (or bots), which conduct operations using laid-down algorithms and provided data. The algorithmic trading popularity in exchanges has led to the high—frequency trading emergence.

The problems of most existing trading bots

The Apex One creators used and developed such programs until 2016, when they were this topic exhaustion finally convinced. The fact is that bots are aimed at specific exchange signals, and came to the crypto world from the financial and stock markets world. Indeed, cryptocurrency is as much a market asset as stocks or fiat currencies,

but it also has its own unique features, in particular—high volatility and the government and corporate mechanisms' absence to influence the rate.

Being engaged in such a complex but profitable area as cryptocurrency arbitrage trading, experts have revealed the trading bots following disadvantages:

- Bots are not adaptive to rapidly changing market conditions;
- As a consequence, the program code needs to be modified periodically in manual mode, essentially creating a new bot;
- The bot main advantages, one is the emotions' absence inherent to humans. Though, it has also become its Achilles' heel. As it has turned out that the calculation capabilities alone are not enough for effective trading, you also need intuitive decisions based on previous experience.

Thus, the eyes of the Apex One developers turned to the achievements in the field of Big Data, neural network models and artificial intelligence.

The Apex One AI is scientific experience, conscious ambition, and the latest technology, a harmony.

And this harmony is created by a friendly team, which you are introduced to by its inspirers and creators, one.

Hello friends! I am **Scott Hall** - the Apex One AI, a dynamically developing international company founder and CEO that uses the most advanced technologies in the cryptocurrency market.

I wrote my first program when I was 14 (8) years old, and at the age of 16 I launched my first startup. Studying mathematical modeling and neural networks at Brighton University, I was particularly interested the artificial intelligence possibilities for predicting currency rates and stock prices, and therefore – just could not pass by blockchain. Since 2012, I've been mining cryptocurrency, not neglecting trading developments as well. My career turning point was our joint work, beginning on projects with my like-minded friend and the Apex One AI second co-founder.

Alan Wolf – the Apex One AI co-founder. Marketing and Public Relations director.

Alan is the man who knows his subject with encyclopedic thoroughness. He is able to write code, and he is a talented developer. But his special gift is building a team and motivating it.

Alan's a salesman natural gift is supported by a master's degree in marketing communications, obtained at the Westminster University in London, where our main idea inspirer graduated with honours. The excellent education and extensive experience in international consulting firms and b2b sector resulted in successful deals dozens and marketing developments based on digital strategies. Largely thanks to Alan, our employees each feels like an international family, a member. A family where care for one another is perfectly combined with responsibility for one's direction in a common cause.

Top Managers

Thomas Mendez
(The Investment Strategies director)

Thomas knows everything about corporate strategies, mergers and acquisitions, efficient investments and markets. With the cool proficiency and a true instinct for profit, he has implemented investment projects in various industries, including IT and telecommunications services, for companies like E&Y, KPMG, SAP Ericsson and Schlumberger-Sema.

Edward Wise
(Chief Data Protection Officer)

Edward Wise is meticulous about enforcing security protocols at all levels, from administrative to cryptographic. Working for a very serious organization, he spent time a lot meticulously dealing with hackers, including cryptocurrency thieves. Going into the private sector, Edward implemented several extremely effective projects in the complex security field. Knowing his adversary by sight, he knows how to anticipate threats and keeps both the team and the software constantly on edge. Even in a friendly get-together atmosphere, Edward keeps the conversation going on anything but professional issues, because data protection is in his blood.

Samantha Upton
(Senior Digital Marketing Specialist)

Samantha has successfully developed promotion strategies for brands in the beauty industry, IT startups, infobusiness projects and personal brands. Her positive attitude to life energizes her content, and her sociability and charm incline opinion leaders and other counterparties to mutually beneficial cooperation. If we have 24 hours in a day, she has at least 36 - otherwise it is impossible to explain how she has time to coordinate content writers and advertisers, work in several social networks, take cats care and work out.

Larry Dolton (Associate Specialist and Data Scientist) head

Larry is a physicist PhD, who has worked in machine learning research projects for more than 5 years. He is specialized in complex networks, especially for the financial and energy industries. Based on a strong scientific background, knowledge in the cryptography, consensus protocols and blockchain technology use, as well as a genuine interest in the cryptocurrency market, led Larry to the Apex One team, which we are very happy about.

**Bradley Parker (CEO and Chief
Artificial Intelligence Officer)**

Bradley has worked for many companies developing machine learning solutions from concept to deployment in a production environment. Bradley has implemented neural network-based decision making systems with fuzzy logic in rolling stock management systems and end-to-end solutions in transportation logistics.

**Alisha Cooper
(Lead HR Specialist)**

If you decide to develop your career path at Apex One AI, Alisha will most likely be your interviewer. There's no need to sugarcoat or hide anything - Alisha is an excellent psychologist and physiologist, and yes, she knows how to verify the data provided. In addition to her psychology background, our head HR is also a marketer, who has worked in the end-to-end analytics implementation in business processes, and has gained some experience as a pool miner. Alisha is a psychologist with knowledge and experience in IT and blockchain. So, providence itself brought her into our friendly family.

The team core values

By developing decentralized networks, we rely more on horizontal connections within the team, minimizing the vertical hierarchy.

- We make the complex things simple and the elitist ones accessible. Back in 2013, after trying to sell some BTC on Mt.Gox, Scott, discovered that newcomers found it difficult to use the largest platform in the world at the time. In principle denying the rich world arrogance, he and Alan decided to make every effort to create fair, convenient, and democratic financial platforms. As a first step, by the year-end, the first code was written, which marked the People's Exchange beginning, allowing everyone to participate in crypto. The Apex One AI project, was noble ideas, a further development based on futuristic technology.
- We are open to like-minded friends. The "founding fathers" creative energy and the arming concept appeal, have brought together data scientists a world-class team that allows us to set and solve any scale problems, effectively using neural networks, natural language processing and deep learning.
- We are not just earning surplus value, we are changing the world for the better.
- Any technology, from the stone axe to artificial intelligence, can be used for good or for ill.
- We understand that today's dramatic events are also the today's elite's unpreparedness a manifestation to face a new, we sincerely hope, fairer world. There is a risk, and we direct all our efforts to ensure that "cyber-freedom" defeats "cyber tyranny".
- Unfortunately, a bank deposit or real estate is unlikely in the foreseeable future to yield an income significantly higher than inflation. Owning gold a bar, too, will not guarantee an increase in its value. And then there is a chance to earn on the asset's volatility, selling and buying pairs at short intervals.

- We understand some people conservative mindset, but think about it for a moment. Trading on fiat currencies pairs (dollar/any national currency, or dollar/troy ounce) and more complex combinations has been familiar to us for a long time. And now we just realize that the metals and the paper value on which money is printed is purely psychological. And only the state's efforts keep the banking system afloat. So, now you see that there is nothing wrong with digital money, with an emission mechanism the authorities independent.
- Decentralized technology is already the new world pillars one, although some bureaucrats, who do not want to look forward, try to take control over it.
We created Apex One AI as an exceptionally convenient platform for secure transactions and earnings by farming cryptocurrencies on exchanges dozens.
- As responsible people, we encourage you to make decisions consciously. Yes, it's true - we make the cryptocurrency market accessible, and it offers significantly higher returns than traditional assets. However, in turbulent times, it is better to invest free funds, not those intended for vital purposes, and certainly not borrowed ones.

The Apex One AI team wishes you prosperity and happiness.

The Apex One development is the inextricable link an excellent example between past, present, and future, where every step is calculated and plans for the near future are based on quality analytics and social responsibility. These trends can easily be traced on the Apex One AI roadmap.

Roadmap

2015

✓ The creating a simple and clear platform idea emerged.

Often good things start with disappointment. Scott Hall was disappointed in existing trading platforms. Difficulties at every step, high interest rates, delays in transactions made us realize that we need to create a clear and democratic platform with the game clear rules.

✓ Development and modeling of the platform base and technology.

Alan Wolf shared the cool idea in its entirety, suggesting thinking about using the neural networks and advanced marketing technologies capabilities. A few years of brainstorming ensued. Information terabytes, the future platform's schematic versions dozens, resulted in a detailed project.

2017

✓ A technical platform creation, beginning and the market and methodologies analysis.

Time a lot was spent on studying the trading bots and their main vulnerability was revealed – their algorithms are trained to react to signals, but have no ability to adapt to changing trends. The choice was finally made in machine learning favour. If we make a platform, it should be based on the most advanced technologies.

✓ Consultations with experienced trading specialists.

The year was marked by the now historic meeting with Thomas Mendez, who in turn recruited Larry Dolton to our team. With their extraordinary human intelligence, our new friends set out to create artificial intelligence.

2019

✓ Market analysis, trading and mining principles and approaches correction.

Scott and Alan decide to sell the mining farm, considering this direction to be exhausted. Time has proved them right. The Rubicon was crossed and all financial and intellectual reserves were directed to trading, including cryptocurrencies.

The fate itself made us a gift in the acquaintance form with a real guru of market strategies - Bradley Parker. In addition to invaluable knowledge and experience, we got tangible financial profits by using his ideas in real work on stock exchanges.

✓ The company budget planning.

✓ Trading algorithms and their correction development.

Meanwhile, Thomas and Larry presented their software solution concept, the Apex One. There was a titanic work on the historical events, computer self-learning mechanisms, fine-tuning, primary base formation etc. But our business basic foundation – the effective farming algorithm, has found concrete outlines.

Second stage 2020

✓ The platform methods and principles approval and correction.

✓ Building the platform architecture.

We've all read about superconductivity, qubits, and synthetic hydrogen. But it was this year that we understood how to use a quantum computer power to improve trading efficiency.

2020

✓ Development started, code writing.

✓ Specialists staff hiring.

✓ The legal framework and other documents on the activities development.

Work on the code is in full swing, analysts' minds are boiling, because correct market signals fixing is the key to a successful forecast. The team is expanding with new specialists. Lawyers are working on the legal aspects and we have a new joy.

We opened a new office in the United Kingdom, which has further strengthened our already cohesive team spirit.

2021

- ✓ Developing the Apex One Ai branding.
- ✓ The Platform registration and obtaining certificates.
- ✓ A program for partners development.

A payment model creation.

Now it's time for branding and marketing. Into our, until then - a boyish "gang" joined the charming Samantha (developing a brilliant brand - book) and Alisha, who set the team-building to a new quality level.

- ✓ A office opening in
- ✓ The APEX token development started.
- ✓ An insurance program and security systems development.

The road to success is achievements, not just a succession. After one unfortunate misunderstanding related to a hacker attack and our, perhaps excessive, positivity and trustfulness - Larry came into our lives and explained to us that data security is not just a firewall and an antivirus, but actions a whole system, and there is no detail. To the priorities of new technology and efficient farming, the concern for our data security was added.

2022

- ✓ Launching the platform in test mode, testing.
- ✓ The staff training by the best experts in the trading field.
- ✓ Conducting a security audit.
- ✓ Language support, addition.
- ✓ An academy creation (for user training).
- ✓ Launching 24/7 support.

Testing the platform exceeded our wildest expectations. It's time not only to learn ourselves, but also to teach others how to farm efficiently. Trainings have been organized for the customer support team staff, and a financial solutions' academy has been organized for our users.

- ✓ The Apex One AI platform official launch.
- ✓ The NFT technology Integration.
- ✓ Functionality expansion, new coins addition.

Hooray! We are officially off. Development starts at birth - and we started adding functionality, adding coin pairs, expanding the exchange pool and plugging in new integrations already at the start.

- ✓ Launching a mobile application for Android.
- ✓ Support and development of multilingual communities (groups, chat rooms or bots).

Initially correctly tuned AI algorithms allow our platform software to self-improve in 24/7 mode and provide passive income to our community members. We communicate on social networks in 30 languages, uniting people around the world with the free finance and equal opportunities ideas.

2023

✓ The Paris office opening.

Press conference at the new office.

✓ A new bonus program presentation and the Apex tokens raffle.

✓ The NFT marketplace opening on the website.

We hope that 2023 will bring peace and a new beginning, more just, world order. However, we realize that pain and suffering will not go away by magic. That's why the Apex One team is already doing its best, and next year we are actively preparing a charity presentation to help forced refugees.

✓ The Apex One AI 2.0 launch.

✓ A movie release about the company and the company's achievements.

✓ Release of personalized plastic cards Apex card pay.

Support for visa and MasterCard cards.

Life does not stand still and we have our finger on the technologies and trends pulse. That's why we're already preparing a profound upgrade of the platform, which will be called – the Apex One AI 2.0

The ecosystem development means improving the transaction system. We are actively working in this direction and next year we will offer our friends personalized plastic cards Apex card pay, as well as support for Visa and MasterCard systems.

2024

✓ The Berlin office opening.

Press conference in the new office.

Launch of the first business-trading academy with the best professionals with working real experience with different assets on the leading marketplaces.

A skilled and creative team, rich experience in trading and machine learning - formed a working model basis that we called Smart Farming, which combines blockchain with artificial intelligence technologies.

Artificial Intelligence

In its broadest sense, artificial intelligence is the self-learning algorithms creation that allow a computer to perform creative functions. In practice, AI is designed to relieve routine operations humans and supplement the human brain capabilities in areas where machines are more efficient at what they do. Let's move away from scientific formulations and futurism and get to the point. How does AI technology help us generate surplus value?

Smart farming

Obvious fact. In the modern world traditional investment strategies, such as investing in real estate, precious metals and other assets, with the stable price growth expectation, have already lost their appeal. Sharp price fluctuations (volatility) are inherent in almost all market assets, and only trading mechanisms, allow earning effectively in time a short period.

Limited human capacity

The human brain allows us to think in abstract images, which provides the broadest creative intellectual perspectives. However, our brain computational capabilities, as well as the ability to accumulate data large amounts, are seriously inferior to computers those.

Combined Factors

Markets are not just numbers and charts. Real events, publications in media, actions, or corporations and influential people inaction, analysts forecasts and other factors hundreds determine the investors behaviour and market quotations changes. All this translates into information and multidirectional trends, terabytes.

Capabilities optimal combination

AI is capable of recognizing human speech, self-learning and generating solutions (recommendations). In combination with big data technologies, it is now possible to process data huge amounts affecting the market situation, including blockchains.

Progress generates profits

Trained machines can process data countless amounts in minutes. In the same way, they can find and process historical data and repetitive patterns for smart trading that are often hidden, inaccessible or not obvious to humans. The traders advantages using artificial intelligence software have become evident in recent years, and they consistently perform above the market average, leaving far behind their colleagues who use outdated bots that require constant manual upgrades.

Farming and AI

Farming implies operations with cryptocurrency pairs on several trading floors simultaneously. Using state-of-the-art AI and quantum computing solutions allows us to react to trends faster than the market rest

About Artificial Intelligence

In the trading strategies development, artificial intelligence is becoming unconditionally dominant. He who uses the latest developments has advantages in the markets, and it is especially relevant for such a volatile asset as cryptocurrencies. Unlike a rigidly prescribed bot algorithm, AI is a self-learning system analysing events, predicting trends, collecting and processing data huge amounts and making decisions capable. AI has no greed or fear, it just can't make irrational, emotion-driven decisions. The Apex One team has developed the most advanced software for efficient, effortless farming - the AI will do everything for you.

What we do

Apex One AI is intellectuals, a team who have taught AI to generate revenue.

- **Human and AI**

Trading any kind is about making decisions about asset transactions for profit. For decades, humans have been accumulating and analysing data about the markets behaviour and reactions. There is nothing unusual that computers began to be used to store and process this information, then relatively simple trading bots appeared, but much greater opportunities are given by the machine learning technologies use.

- **Data Collection**

To adjust its strategies, I.I. uses historical knowledge, comparing its impact on current and future events. Usually the incoming data looks like a chaotic structure, but our deep learning tools allow us to provide efficient sampling from multiple sources for the right parameters.

- **Data organization**

To adjust its strategies, I.I. uses historical knowledge, comparing its impact on current and future events. Usually the incoming data looks like a chaotic structure, but our deep learning tools allow us to provide efficient sampling from multiple sources for the right parameters.

- **Self-learning**

By adding new data and fine-tuning existing data, the system performance is improved unlike bots, the AI algorithm allows it to improve continuously using automatic trading advisors.

• Building a trading algorithm

Algorithms for the AI technology application in trading are designed to work with traditional assets. The Apex One team was able to «friend» blockchain algorithms and artificial intelligence. As a result, the professionals' knowledge, and experience allowed to form algorithms for effective farming based on signals thousands hundreds from exchanges dozens.

• Farming

In order to use farming as passive income a means, you only need to choose a cryptocurrency pair and an exchange pool. Technology will do the rest.

• The added value

Our developments in the AI and quantum computing field, allow you to predict and react to events faster than others, simultaneously tracking them on exchanges dozens. From the profits from transactions on the cryptocurrency pair the income is generated at time a point, and then is distributed to the farmer.

• Effective protection

Big Data capabilities are magnitude orders greater than the human brain computing capabilities , and in symbiosis with the AI analytical capabilities, allow us not only to work effectively on your behalf, but also provide information security important aspects, and help analysts by structuring data a huge volume and highlighting important events that may not be noticed in time by humans.

• Cybersecurity

Learning from historical events, allows AI to predict potential threats and vulnerabilities to the platform, personal data integrity, transactions, etc. Based on these signals, our cybersecurity team makes operational decisions to protect our ecosystem from attackers.

• Risk-Management

Equally important are signals about suspicious events on exchanges, significant information from the media, changes in market trends, especially in the IT industry niche, which traditionally affects cryptocurrency rates. Thanks to instant comparison with previous experience, AI gives a forecast, or warns of a trend, providing great support to risk managers.

Taking care of asset and data security is our top priorities, one. In the next section, you will learn about the exceptional security measures used by the Apex One AI.

Cybersecurity

The free world fundamental values, one, is the information free access and exchange. However, the individual privacy is inviolable. We store private information huge amounts on our hard drives, in our gadgets and in the cloud memory. And while account passwords are the individual responsibility, the transactions and cryptocurrencies security is our relentless concern subject.

We use security protocols in multiple layers regarding administrative processes, communications, and software products. Our processes all are carried out only within secure integrations with reliable and trusted counterparties. As a specialist in the business secrets and personal data protection, I cannot reveal all our developments in this area, but I will tell you about the solutions some we used to protect your investments and secure.

What do we do?

The work on information security includes procedural aspects and software and hardware. We try to minimize risks at all stages.

1

Analytics and testing. You can't effectively prevent threats without understanding the attackers methods and motivations. And we know a lot about those who try to attack the cryptocurrency savings safety and sabotage exchanges. This knowledge allows us to conduct effective stress-tests in a team, identify potential vulnerabilities, and constantly test the system for unauthorized access. We conduct monthly automated Apex AI service vulnerability scans. Independent tampering tests are also conducted, at least once a year. Our principle is to be the perpetrator one step ahead to prevent crimes.

2

Work with staff. Openness and goodwill do not negate the applicants screening for jobs in our team by the security service. We carefully study the applicant's biography, profiles, reviews, recommendations, etc. We always welcome new talented and creative employees and count on their understanding. Our internal protocols designed to protect corporate secrecy are equally important, which also secures the overall security of the platform.

3

Working with counterparties. We care about our reputation and are our responsibility fully aware to the community. That is why we work only with proven platforms with an impeccable reputation. No matter how tempting the offers are, we conduct a new potential business partner thorough screening and always make an informed decision.

4

Software solutions. Since the project idea inception, we have prioritized the secure software implementation. Information security specialists work together with development engineers at product creation, all stages.

- Secure Systems Development Life Cycle (SSDLC) The SSDLC scope includes all systems development and integration projects used for and in the Apex AI services support.
- Apex AI services have built-in rate limiting and automatic blocking features to protect against service advanced denial or authentication attacks. The Apex infrastructure is also protected from volume attacks with Cloud Flare.

- Protection against DDoS attacks. Apex AI services are protected by Fortinet, FortiWEB, and Web Application Firewall services.

Work with staff. Openness and goodwill do not negate the applicant's screening for jobs in our team by the security service. We carefully study the applicant's biography, profiles, reviews, recommendations, etc. We always welcome new talented and creative employees and count on their understanding. Our internal protocols designed to protect corporate secrecy are equally important, which also secures the platform overall security.

Protection levels

- Threat analysis.
- Internal administrative protocol.
- Testing and searching for vulnerabilities.
- Data integrity protection.
- Communications (transactions) protection.
- Protection against unauthorized access.

We get questions a lot about the cryptocurrency booming world and our development peculiarities based on the neural networks—Smart Farming advantages. The following section is devoted to the answers to the most popular questions.

FAQ

1. What is a cryptocurrency deposit?

You can store your crypto assets on your device's hard drive or a flash drive (non-custodial wallet). As with storing cash at home, in this case, your funds do not work in any way to multiply income. Today, DeFi-protocols provide the services most offered by traditional financial institutions: banks and insurance companies. Many people earn and spend in cryptocurrency with little or no recourse to fiat money. Such service's popularity is due to incomparably higher profitability, a single intermediary absence in a financial institution form, the transactions speed, data security and lower transaction fees. Learn more about the Apex One deposits.

2. What is farming?

The term - «farming» itself owes its origin to a meme in which people make investment crops and harvest cryptocurrency. Since then, some people have understood farming to mean any way to make passive money from cryptocurrency. In the Apex One's version, farming is providing income a high-tech process on cryptocurrency deposits, based on the market experts real experience who taught artificial intelligence to predict exchange events. We know how to identify promising altercoins, combine them into effective pairs and earn added value for investors. [Learn more about farming.](#)

3. Is it worth choosing the token offerings with the highest promised returns?

It is true, that investments in crypto-assets have brought fortunes to many people and can do it for many others in the long run. From this point of view, everything resembles the situation with the IT giants shares. However, as of today, we think up to 50% in cryptocurrency a weighted average return is a realistic figure that reflects the market state. This does not mean that a higher yield is impossible in principle—the choice is always up to the investor. Learn more about the Apex One investment products.

4. Mining or farming - which is more profitable?

Investing in a mining farm cannot be called a passive income from cryptocurrency. It is a business, with all the associated costs and risks. If you expect any serious income from mining, we are talking about dollars to thousands hundreds initial investments and even more. If you are not planning to make mining a lifelong business, it makes sense to entrust your operations in the market to those who have and develop the appropriate infrastructure and knowledge, getting a stable additional income in cryptocurrency. Learn more about the mining prospects.

5. What is the starting money amount for farming?

If you are new to crypto investing, Apex One gives you an opportunity to start with the smallest investment (from \$10). We deliberately made the "entrance ticket" available to everyone. The world of decentralized finance is the humanity present and the future. For us, it is an educational mission, more reflecting our corporate philosophy. You should agree that drawing information from our knowledge base and getting real experience with cryptocurrency - is the fastest way to an informed investment without any risk. [Join the Apex One team.](#)

6. How is digital money secured?

Having already become the global financial system, cryptocurrencies part traditionally correlate with the IT companies and the general market situation share price, which is influenced by multidirectional trends hundreds. Investors tied to "traditional" values (precious metals and reserve currencies) may be interested in staplecoins tied to them. In general, one can speak about any traditional asset's stability and firmness very conditionally and course, it, is better to make money on the short run. [Learn more.](#)

7. What is the cryptocurrency high volatility related to?

No doubtly, it is related to the recent times general economic situation, often dictated by political and even epidemiological circumstances. If we compare price changes graphs for gold, energy, construction materials and some fiat currencies, we understand that sharp exchange rate fluctuations (up to percent tens and hundreds) are not only the digital money fate. The crypto assets investment appeal and other functions have not changed much since their emergence. Sharp changes in their exchange rates were influenced by the government agencies and major financial speculators actions, which, again, makes cryptocurrency similar to other, more familiar to many, assets. [Learn more.](#)

8. Will the "bear trend" last?

Not forever - that's for sure! All markets are going through bad times. It will not be the first time, nor will it be the last time - the stock market pendulum will swing the other way with the first optimistic news. Our cautious prediction is that we will see the growth in cryptocurrency assets from the fall through early 2023 (please don't take it as an offer). The blockchain protocol itself is designed so that in the long run, cryptocurrency is destined for growth, provided it is in demand as conducting transactions a means. Miners and those who bought VTC for \$70,000 should have patience, without which it is hard to work in the finance world. By the way, the farming prospects, in the "crypto-winter" period look even more attractive. [Learn more.](#)

9. Why the Apex One?

At all times, in stock trading, the best results are shown by those who have operational information a lot and are able to make quick decisions based on their own analytics. In 2022, companies that use artificial intelligence are 25% more efficient than those using rapidly ageing software solutions. The Apex One team combines the developers and traders expertise with the latest and greatest technology to ensure consistently high performance. Join the Apex One team.

10. What investment tactics to choose in 2022?

"Don't put your eggs in one basket" - a rule for all times! Nowadays, investments a diversified portfolio implies the cryptocurrencies presence in it. The Apex One strategy implies secondary diversification a kind, within the cryptocurrency pair and increasing its value within the asset through the quantum computing methodology use, which creates additional benefits for our clients. [Learn more.](#)

The New Financial Reality

Cryptocurrency has long been firmly embedded in people's lives as payment a means and as an investment vehicle. Token capitalization figures and the unceasing passions around blockchain show that the decentralized finance prospects are appreciated not only by private investors millions hundreds, but also by big business. The exchange rates only fuel interest ups, downs and new records in the booming market for digital assets. For a relatively short time of existence the game rules in this market have become clear, and processes became transparent not only for financial specialists, but also for the people masses wishing to learn passive income a new way.

We see our mission not only in providing investors with income, but also in educating and informing. The us more there are in the DeFi world, the more in demand cryptocurrency will be, which means us each will become richer. Investor's choice should be conscious and based on the knowledge shared with you by Apex One team and other analysts and cryptocurrency market experts.

So - how does cryptocurrency work?

Digital coins exist only in the virtual world, but they can be used to buy tangible goods and services, as well as to make money. Cryptocurrency issuance is fundamentally different from the issuing traditional money process. There is no single issuing centre in the meta-universe, anyone can try to mine and code add chains to the block, receiving a reward. However, this does not mean that the cryptocurrency market is complete anarchy, a sphere. There are rules, but they are created not by governments, but by the blockchain code creators and the market participants interaction in transactions.

The cryptocurrency mining process is quantitatively limited, which, in the long run, makes it not subject to inflation and is designed to ensure the exchange rate growth, especially after the coin issuance limit is exhausted. It is the government that turns on the printing press when it deems necessary—the decentralized finance world works differently. The payment speed and transfer fees for cryptocurrencies are generally lower than in the conventional (fiat) currency market. Another important point that attracts investors is the anonymity and unnecessary barriers' absence when making transactions with cryptocurrency. Transactions participants are extremely difficult to calculate.

Bitcoin has become a pioneer and “gold standard” a kind among digital coins. BTC has the largest capitalization, is accepted as payment in a means and easily transformed into fiat money, at the effective at the moment rate.

The bitcoin phenomenal success inspired miners to mine altercoins, which the most famous are Ethereum, Ripple, LightCoin and Monero. This digital money all is also based on blockchain technology. The bitcoin's competitors, transactions can go much faster differences in encryption codes because. Just listing all the existing Altercoins would take more than the text one page. Some of them have brought significant profits to startups, miners, and investors, but assessing a new token prospects is not an easy task for a newcomer to the cryptocurrency market.

Where to buy cryptocurrency.

You can buy, sell and exchange cryptocurrency in online exchangers, cryptocurrency exchanges and p2p-services (private ad resources, when working with them, you should be very careful. You need to assess the resource reputation, the commission size, the transaction speed and the service convenience. As for the exchanging fiat money technology for cryptocurrency resources, it is almost the same as offline. Choose a rate, enter details and confirm the transaction.

Where to store cryptocurrency.

Wallet type

There are cryptocurrency wallets, several types for storing and making transactions with cryptocurrency, which are mobile applications, special programs or separate standalone devices created to conduct all transactions with tokens. The wallet type choice depends on the specific goals pursued by the user.

How to use cryptocurrency.

Digital money is mainly used for transactions and an investment tool, a means. It is possible to buy goods and services for cryptocurrency from those business entities that accept payment in major cryptocurrencies. Such transactions' infrastructure is growing, but still is not as developed as for national currencies. Apex One provides fast and anonymous transactions. It is a well-protected resource which uses the most advanced solutions in artificial intelligence, bringing decent passive income by farming cryptocurrency for our community members.

In addition to effective investments in cryptocurrency farming, we offer an attractive affiliate program, which is presented below.

The Apex One Ai bonus program

Our partners develop crypto community and earn good income in cryptocurrency due to the bonus program advantages.

1

Advantage #1 Social networking activity monetization by performing bonus tasks. If you comment a lot on events and trends in various communities, why not turn your social activity into additional income, a means?

2

Advantage #2 Earn through referral links. Create links in your affiliate account, attract investors and develop the community your own part and get the rewards you deserve.

3

Advantage #3 Work with pleasure. The most active affiliates average income is \$5000 per month, which allows them many to consider cooperation with the Apex One Ai as income their main source.

4

Advantage #4 Contribution to technological progress. Partnership with us means not only a decent passive income, but also the high-tech market product Smart Farming promotion and a society development that is looking forward to the finance decentralized world future.

5

Advantage #5 Easy to manage. Information about your partners' activities and your bonus payments is available 24x7 in an easy to understand form. The personal account friendly interface is user-friendly and easy to work with.

6

Advantage #6 Decent motivation system. We do not have any limits on earnings for our partners. The bonus program most successful participants, depending on the referrals' activity and the current situation on the cryptocurrency market, receive dollars thousands tens per month. It all depends on your activity to promote the Apex One AI in communities and groups.

How it works

Affiliate account

Your personal account functionality allows you to create affiliate links. A user who has followed the link and completed registration automatically becomes your referral, and you are rewarded by default for every his activity on the platform.

Innovative product

We recommend that you explore our knowledge base and make sure that Smart Farming is a product based on the latest developments in artificial intelligence. We use the most advanced technologies to work effectively on different exchanges, which provides a stable income to our new investors and partners.

The crypto community expanding

We are focused on profits for our investors, but we are also interested in educating the people widest possible range about the decentralized finance world benefits. Using digital currencies as settlement and capital appreciation a means brings a new, fairer economy era closer, making everyone in our ecosystem richer. Therefore, the more transactions that partners make, the more substantial and unlimited the return on investment is.

Who can become a partner

- The media space, any active member. If comments and social media posts are your life part, you can easily monetize your traffic by performing simple bonus tasks.
- YouTube's bloggers with 5,000 subscribers or more an audience. Invite to our community more people, place partner's links under your unique videos and get passive income by attracting new investors.
- Business accounts with 2,000 or more people, a client base. Scale your profit by promoting the progressive Smart-Farming cryptocurrency market technology.
- Groups in social networks with the participants number from 500 people. Share Crypto community news from our resources pages, post referral links and provide interesting content for discussion in the community and additional income for the group creators.

- Media Resources. We are ready to provide you with the up-to-date content on application of artificial intelligence technologies for increasing efficiency of stock exchange trading and mutually beneficial cooperation creation with information portals.
- Journalists and financial experts. By posting information about the Apex One and referral links in your personal accounts on social networks and blogger platforms, you develop the decentralized finance field and provide yourself with additional income.
- Opinion leaders in the cryptocurrency community. Expand the meta universe financial segment with us, talk about modern trading technologies like Smart Farming and develop your referral pool on our platform.
- Content Authors. Share advertising ideas, in the field you specialize in, with us. We are interested in cooperation with the extraordinary and effective marketing solutions authors. And of course, post partner links in your projects and earn extra income.

Six simple steps to success with the Apex One Ai

In order to receive an impressive additional income, you need to follow a simple algorithm.

1. Go through a simple registration procedure and fill out the application form.
2. Our team will promptly examine the provided information and decide the partnership format, offering you the five partnership levels one.
3. Generate referral links and track their effectiveness right from your personal account.
4. Receive the reward automatically for your referral, each financial activity.
5. Complete bonus tasks for an extra fee.
6. Invite new members to the Apex community and scale your income.

Calendar activity

Crypto world is actively developing, so cooperation conditions may change and be supplemented with new options in accordance with new trends and Smart Farming forecasts. Follow the events and be sure that our bets are based on the current market situation and the artificial intelligence prognostic abilities.

Remaining questions?

We tried to be as honest and detailed as possible about all aspects of earnings in the cryptocurrencies world on our website pages and knowledge base. Also you can get comprehensive advice on any question from the support service.

Attention!

Conditions of bonus rewards and marketing actions may change, but always remain beneficial for our partners.

You've met our friendly and committed team, as well as our exclusive **Smart Farming** product.

If you have a desire to develop professionally with us, you can find current vacancies in our website "Careers" section.

And for getting passive income you can become our investor and partner by creating a personal account at.....

See you in the Apex One AI ecosystem.
